

What the invention claimed is:

1. A light guide comprising at least two light guide elements abutted against one another, and a plurality of grooves engraved on at least one said light guide element and forming a plurality of light passages in between at least two of said at
5 lest two light guide elements.

2. The light guide as claimed in claim 1, further comprising a message disposed inside said light passages.

3. The light guide as claimed in claim 1, wherein said light passages have a rectangular cross section, circular cross section, or triangular cross section.

10 4. The light guide as claimed in claim 2, wherein said light passages have a rectangular cross section, circular cross section, or triangular cross section.

5. The light guide as claimed in claim 1, wherein said light guide elements are shaped like a rectangular bar, a round bar, or a triangular bar when abutted against one another.

15 6. The light guide as claimed in claim 2, wherein said light guide elements are shaped like a rectangular bar, a round bar, or a triangular bar when abutted against one another.
